Update 2

November 28, 2023

0.1 Download the Repository

Repository Link

- This is our team's repository. This repository contains all the necessary code that we worked on and it also contains the dataset that we annotated.
- You do not need to do anything like uploading and adjusting the paths. Just run the cells sequentially.
- All the necessary commands are written in this notebook itself

0.2 Install the Requirements

- Install all the python dependencies
- After Installing dependencies, Restart the runtime. If you do not restart the runtime, the python will throw "module not found error"

[2]: | pip install -r road-detection/TwinLiteNet/requirements.txt

3 Metrics

- Evaluation metrics are pixel accuracy and IoU(Intersection over Union).
- We have achieved an accuracy of 96.4% for Driving area segment
- We have achieved an accuracy of 98.4% for Lane Line segment.
- An average of 97.4 % pixel accuracy is achieved which is comparable to the original model's accuracy.
