0.1 Download the Repository

Repository Link

- This is our team's repository. This repository contains all the necessary code that we worked on and it also contains the dataset that we annotated.

- You do not need to do anything like uploading and adjusting the paths. Just run the cells sequentially.

- All the necessary commands are written in this notebook itself

```
[1]: !git clone https://github.com/balnarendrasapa/road-detection.git

0.2 Install the Requirements

- Install all the python dependencies
- After Installing dependencies, Restart the runtime. If you do not restart the runtime, the python will throw "module not found error"

```
[2]: !pip install -r road-detection/TwinLiteNet/requirements.txt
```
